

# How to make my miner's lamp?

1

You need glue, a pair of scissors and the shapes that our team will give you.

2

Cut out all the shapes and as shown on the sheet, don't forget the cut outs on the top of what will become the top of the lamp.

3

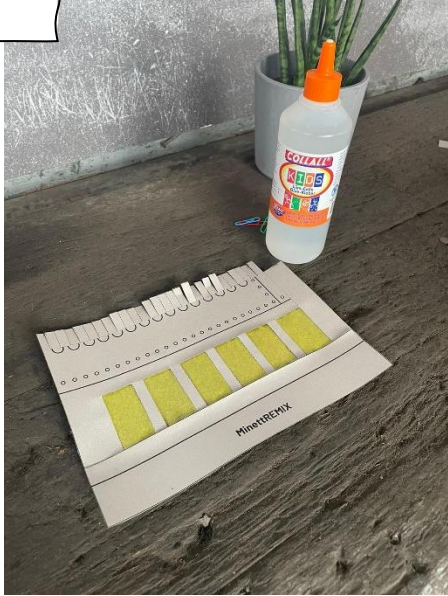

Here are all the cut-out shapes. Now all you have to do is put them together!

4

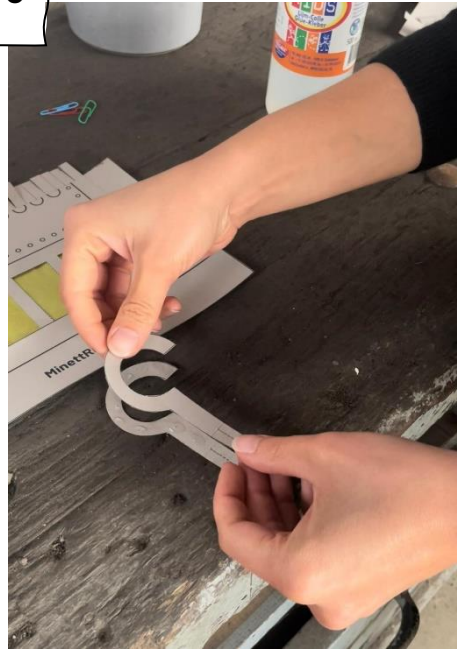

Turn this shape over and glue the colored transparent paper strip, so that it covers the openings of the lamp.

5

Turn the sheet over and stick the strip marked "MinettREMIX" on it. You will see a line to help you place it properly.

6

Glue the two hooks together. This way the hook will be more robust.

7

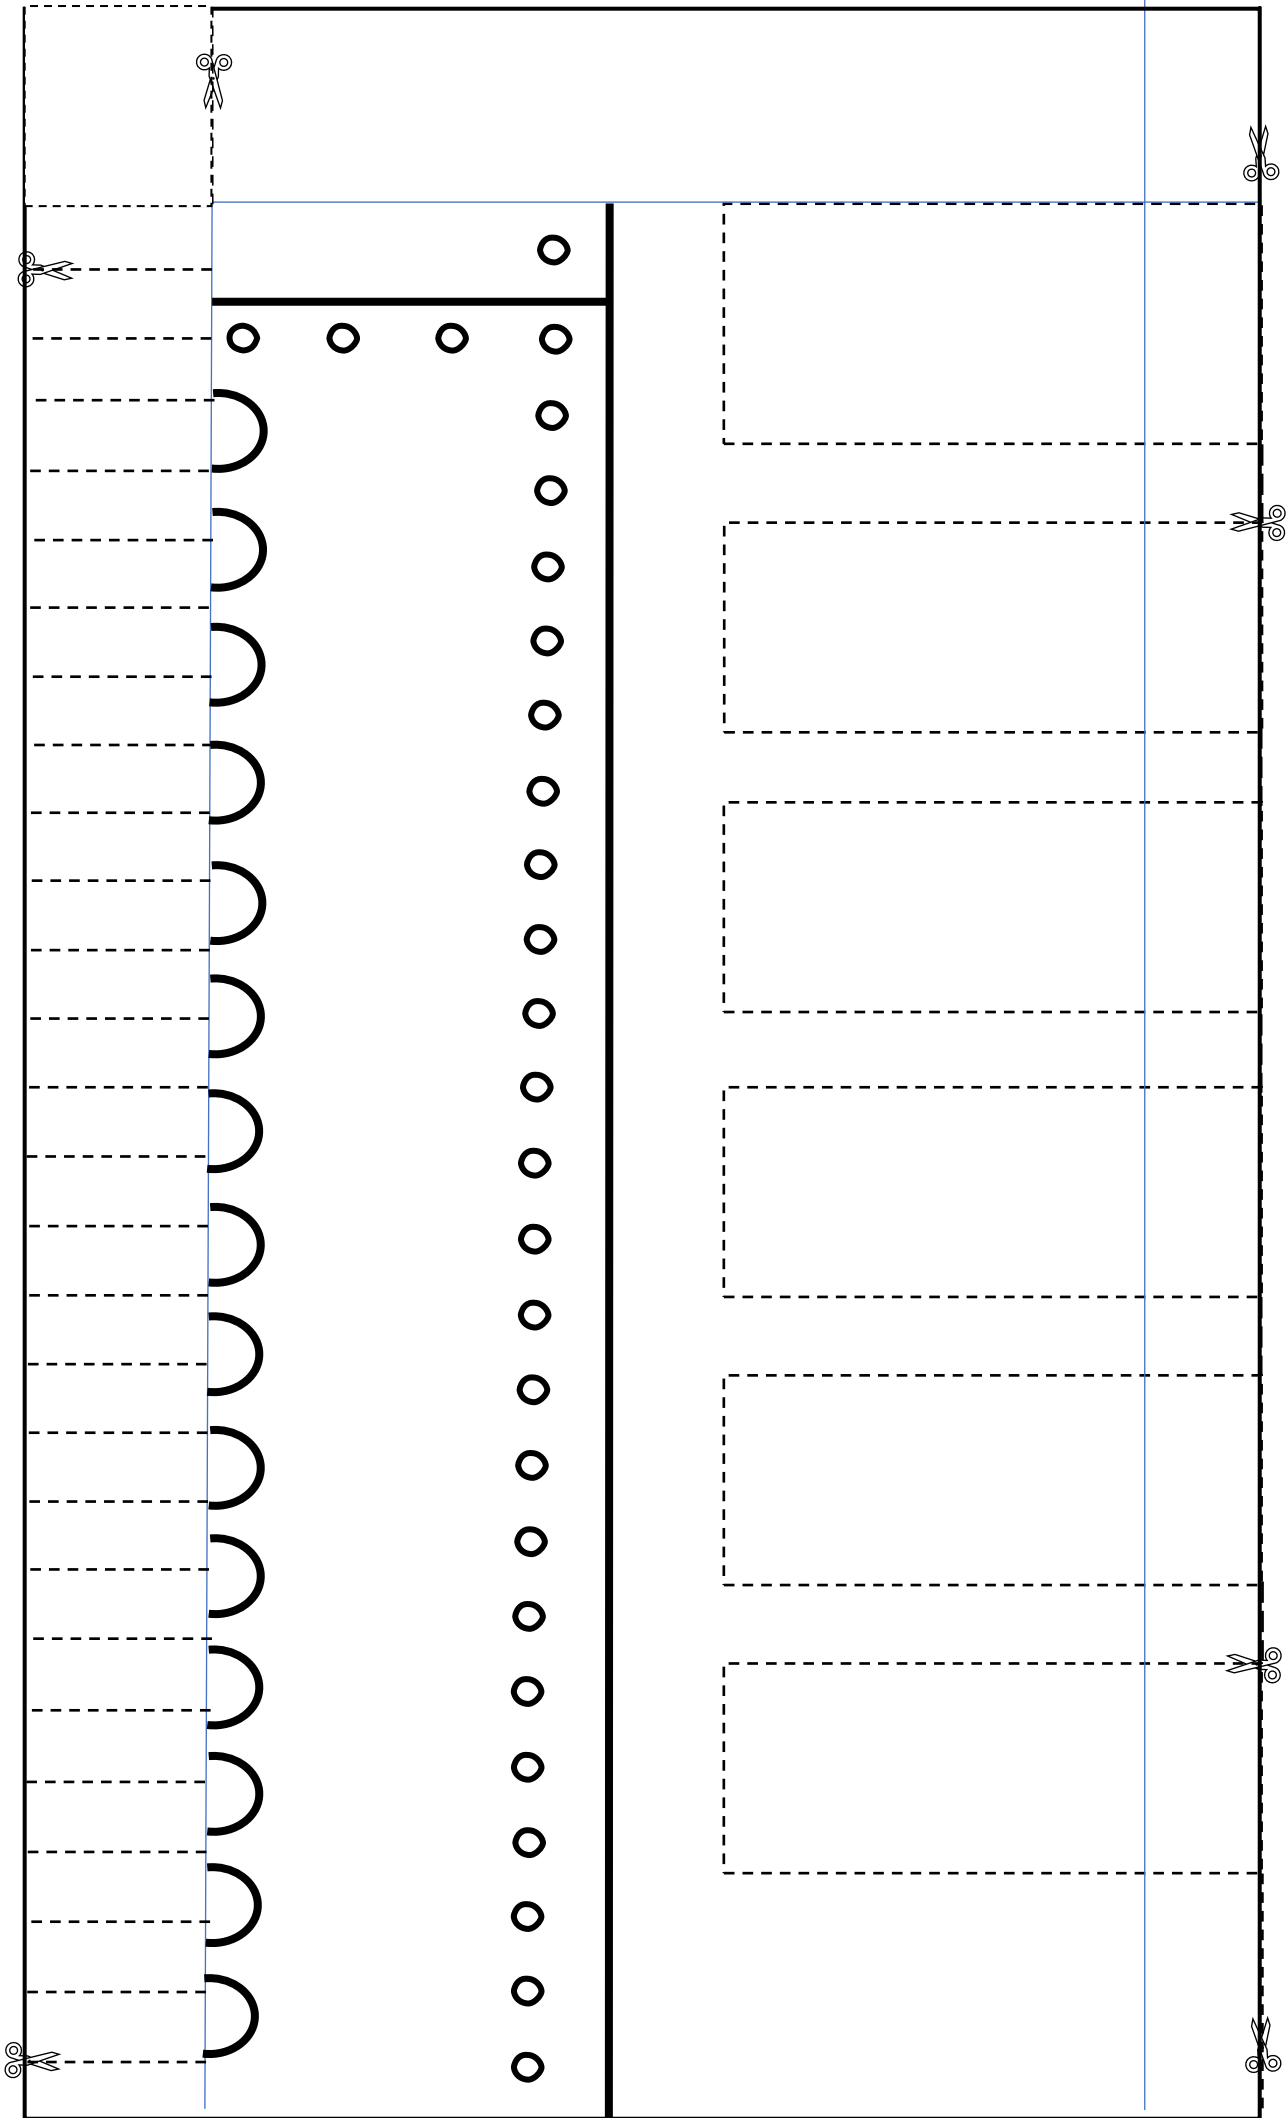

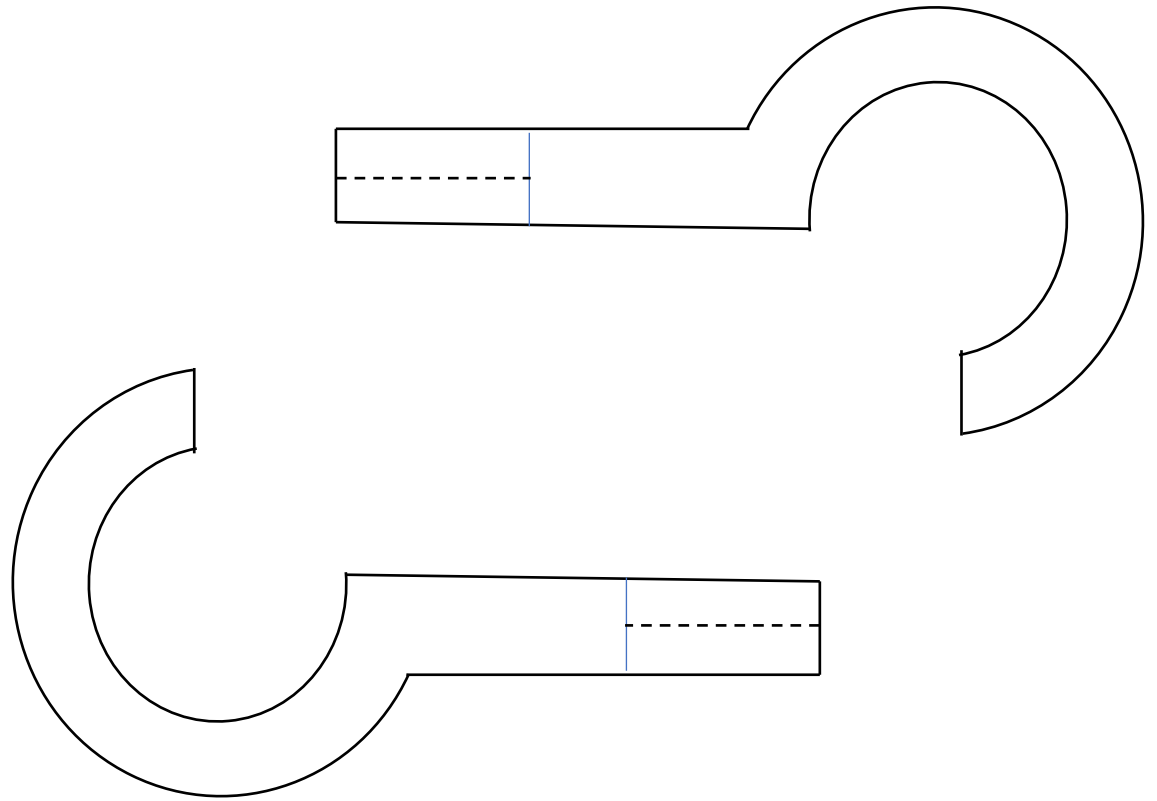

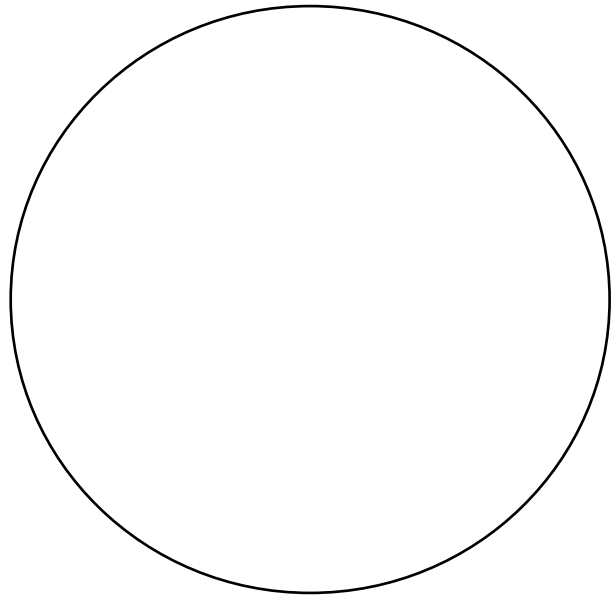

Assemble the lamp with glue. A boundary line helps you see how to glue the paper cylinder.

8

Glue the hook on the circle and pass it under the lamp. By pulling the hook from the top of the lamp, it will rise.
